APPLICANT: Peerly, RObert B.
APPLICANT: Peerly, RObert B.
TILE OF INVENTION: Multiple Drug Resistance Gene atrD of TITLE OF INVENTION: Aspergillus Nidulans
TORRESPONDENCES: 3
CORRESPONDENCE ADDRESS:
ADDRESSEE: Eli Lilly and Company

Sequence 2, Application US/08996545 Patent No. 5928898

Patent No. 5928898 GENERAL INFORMATION:

ADDRESSEE: Ell Lilly and Company STREET: Lilly Corporate Center CITY: Indianapolis STATE: Indiana

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/996,545

FILING DATE

ZIP: 46285 COMPUTER READABLE FORM: MEDIUM TYPE: Floppy of

U.S.

COUNTRY:

CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: WEDSERFY, 39,872
REGISTRATION NUMBER: 39,872
REFERENCE/DOCKET NUMBER: X-11766
TELEPHONE: 317-276-334
TELEFAX: 317-276-334
INFORMATION FOR SEQ ID NO: 2:
SEQUENCE CHARACTERISTICS:
LENGTH: 1334 amino acids

The patent discloses novel polynucleotides encoding Exophiala spinifera fumonisin degradative or transport enzymes such as flavin monocxygenase, aldehyde dehydrogenase, permease and p-divoprotein. A fumonisin esterase enzyme with at least one fumonisin degradative enzyme is useful for detoxifying fumonisin or a structurally related mycotoxin present in harvested grain, on application to a plant or to harvested grain of uring processing, or to processed grain that is to be used as almal or knwan feed, or as a slage. Nucleotide fragments of the present invention are useful as probes and primers. They can be introduced into microorganisms that multiply on plants to deliver enzymes to potential target crops. The genes encoding the degrading enzymes are introduced via a vector into a microbial host and the transformed host is supplied to the environment, plants or animals for reducing the pathogenicity of a fungus producing fumonisin. The genes of the pathogenicity of a fungus producing fumonisin. The genes of the pathogenicity of a fungus producing fumonisin. The genes of the convention are fermented in a bacterial host and the resulting bacterial is processed and used as a microbial spray. The nucleotide sequences can be used alone or in combination to engineer microbes or other corganisms to metabolise fumonisin and resist its toxic effects. The present procein sequence is p-lycoprotein, a fumonisin
                                                                                                          Novel polynucleotides encoding Exophiala degradative or transport enzyme which is useful for detoxifying fumonisin or structurally related mycotoxin during processing of grain for human or animal food
                                                                                                                                                                                                                                                  Claim 1c; Page 77-82; 90pp; English.

lactam compounds from a micro-organism that comprises enhancing ABC dadenosine triphosphate (ATP)-binding cassette) transporter activity of the micro-organism. The method is used for enhancing the production and secretions of beta-lactam antibiotics like penicillin and cephalosporins. Manipulation of the ABC transport protein system provides a means for enhancing beta-lactam secretion. The present sequence represents the P. chrysogenum ABC transporter aal protein sequence.
                                                                                                                                                                                                                                                                                                                                                                     Enhancing secretion of beta-lactam compounds from a micro-organism by enhancing adenosine triphosphate-binding cassette transporter activity, useful for producing e.g. penicillin and cephalosporins -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               238
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       291
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ::|: :::|| | ||::|

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a multiple drug resistance gene atrC of Aspergillus nddulans. Host cells transformed with vectors comprising the atrC gene are used for the recombinant expression of atrC polypeptide. The atrC polynucleotide is used to produce nucleic acid molecules which are useful in diagnostic assays for detection of atrC polynucleotides. The atrC polypeptide may be used to identify agents which inhibit multiple drug resistance. These agents may be useful for the treatment of fungal diseases. New antifungal compounds may also be identified using the gene disruption or gene replacement strains of Aspergillus nidulans. The present sequence represents atrC polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  --FVLWEVYLFIGKFVLTYVSTAAITISAIRTTRTLRRVFLECTLR 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 123 tesgrrqtfvtmppswrllyfvylgiarlvlsytyntlltyaayrivrnirhaylkaals 182

                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents the multiple drug resistance protein of Aspergillus funiqueus, designated AfumNAI. The specification describes a method whereby cultured transformed fungal cells are used to determine the multiple drug inhibition activity of a compound. The method is useful for providing nucleic acid molecules which encode multiple drug resistance proteins from Aspergillus funiques (Afu) which are useful for determining the MDR inhibition of a compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              153 AIATXVTTNGNRIQTGIAEKLVFTVQALSMFFSAFVVALASQWKLALITMSVIPAIFLVT 212

                                                                                                                                                                                                                                                The present sequence represents a multiple drug resistance protein, designated attp, which is isolated from Aspergillus nidulans. The attp polymuclectide is used to produce nucleic acid molecules which are useful in diagnostic assays for the detection of atrb polymuclectides. The atrb polypeptide may be used to identify agents which inhibit multiple drug resistance. These agents may be useful for the treatment of fungal diseases. New antifungal compounds may also be identified using the gene disruption or gene replacement

                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for enhancing the secretion of beta-
lactam compounds from a micro-organism that comprises enhancing ABC (adenosine triphosphate (ATP)-binding cassette) transporter activity of the micro-organism. The method is used for enhancing the production and secretions of beta-lactam antibiotics like penicillin and cephalosporins. Manipulation of the ABC-transport protein system provides a means for enhancing beta-lactam secretion. The present sequence represents the P. chrysogenum ABC transporter aal0 protein sequence.
                                                                                                                                                                                                                                                                           Enhancing secretion of beta-lactam compounds from a micro-organism by enhancing adenosine triphosphate-binding cassette transporter activity, useful for producing e.g. penicillin and cephalosporins -

Host cells transformed with the DNA sequence are useful for identification of potential antifungal compounds, and for enhancing the activity of proven antifungal compounds to previously resistant species.

Saccharomyces cerevisiae, transformed with vectors that provide for the expression of DNA encoding AfI-MDR1. Transformed host cells can be used to identify cpds. that inhibit fungal MDR activity.
                                                                                                                                                                                                                                                                                                                                                     New multiple drug resistance gene of Aspergillus flavus – used to identify cpds. that inhibit fungal multiple drug resistance activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a polynucleotide sequence encoding a cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the PGP protein PGP, also known as multidrug transporter. MDR1 is a member of the ABC transporter superfamily. The enzyme serves as an efflux pump exporting small inclecules across the cell membrane. The invention includes a cynomologous monkey (Macaecicularis) PGP coding sequence and protein, and also that of an allelic variant. The PGP polynucleotide and protein, and also that of an allelic variant. The PGP polynucleotide and protein and also the cDNA are useful for inhibiting PGP transport activity in a mammalian cell. They may also be used for increasing the activity in a mammalian cell. They may also be used for increasing the bloavallability of a drug. The present sequence represents the cynomologous monkey P-glycoprotein variant 2. The protein has an additional 3 amino acids when compared to PGP variant 1 (AAB81065).
                                                                                                                                                      are present compared
                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein (PGP) and homologous PGP polypeptides are useful for predicting bloavailability of compound and increasing PGP transporter activity in
